Professional Summary

Software Developer & AI Systems Engineer with strong expertise in **Python 3.x, C/C++, Data Structures & Algorithms, and Reinforcement Learning Environments**. Proven experience authoring reproducible coding environments, isolated unit test harnesses (PyTest), and golden reference solutions for frontier AI model training and evaluation. Skilled in debugging complex codebases, multi-turn reasoning rubrics, and microservice architectures (FastAPI, Docker). Strong Computer Science foundation from **IIIT Sonepat** (B.Tech IT) with 200+ solved algorithmic problems and NASSCOM AI Data Engineering certification.

Technical Skills

Programming Languages:	Python 3.x, C, C++, Java , JavaScript (ES6+), SQL, Bash / Shell Scripting
RL & AI Environments:	Reproducible Benchmark Environments, Golden Reference Solutions, Bug Triage & Injection , RLHF Evaluation, Multi-Tier Rubrics, Adversarial Testing, Chain-of-Thought (CoT)
Testing & Code Quality:	PyTest, Unit Testing, Mock Fixtures, AST Analysis, JSON Schema Validation , Root-Cause Analysis, PEP 8 Compliance
Backend & DevOps:	FastAPI, Flask, Docker, Docker Compose, Isolated Sandboxing, RESTful APIs, Git / GitHub Actions, Linux / POSIX
Core Computer Science:	Data Structures & Algorithms (200+ Solved), Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks

Technical Experience

Outlier AI — AI Evaluation & Software Engineer

March 2026 – Present

Remote Contractor | Frontier AI Data & Reinforcement Learning

Tech Stack: Python, C++, LLM Evaluation, RLHF, PyTest, Adversarial Benchmarks, Rubric Design

- Designed and engineered **reproducible reinforcement learning environments** and multi-turn coding benchmarks to train and evaluate frontier AI models on real-world software tasks.
- Authored **golden reference code solutions** in Python and C++, accompanied by automated PyTest validation harnesses and deterministic test fixtures.
- Conducted root-cause analysis on failing model trajectories, identifying subtle logic bugs, runtime regressions, and edge-case hallucinations with a **98%+ task acceptance rate**.
- Formulated clear technical documentation and multi-tier evaluation rubrics (Correct, Partially Correct, Deficient) to ensure data quality for model fine-tuning.

Software & Backend Developer — Open Source & Projects

Jan 2024 – Present

Python Backend Architecture & Sandboxed Microservices

Tech Stack: Python, FastAPI, Flask, Docker, Docker Compose, PostgreSQL, Git

- Built containerized backend microservices with structured Pydantic validation, error handling, and end-to-end integration test suites.
- Engineered reproducible local development sandboxes using Docker Compose, simulating external service dependencies and APIs.
- Utilized AI coding agents (Claude Code, Cursor) daily for code refactoring, test scaffolding, and performance optimization.

Key Projects

1. AI Agent RL Environment & Benchmark Platform

Jan 2026 – March 2026

Tech Stack: Python, Docker, PyTest, Asyncio, Subprocess Sandboxing, JSON Schema

- Architected an automated evaluation harness that executes autonomous coding agents inside isolated Docker sandbox environments to solve realistic bug-fixing and feature-addition tasks.
- Authored 25+ real-world engineering problem scenarios with buggy starter code, hidden evaluation test suites, and verified golden solutions.
- Implemented automated scoring and trajectory logging to assess agent problem-solving steps and code correctness.

2. AI Video-to-Text Multimodal Feature Pipeline

Jan 2026 – March 2026

Tech Stack: Python, PyTorch, Transformer Decoder, ResNet-152, C3D, CUDA, FastAPI

- Developed an end-to-end multimodal deep learning pipeline extracting spatiotemporal features with PyTorch and exposing inference via an asynchronous FastAPI backend.
- Dockerized the inference service with multi-worker scaling, containerized health checks, and optimized GPU memory caching for sub-100ms response times.

3. Real-Time AI Biometric Anti-Spoofing Security System

Dec 2025 – Jan 2026

Tech Stack: Python, OpenCV, PyTorch, dlib, Silent-Face Anti-Spoofing, AES-256 Encryption

- Developed a real-time computer vision security pipeline integrating multi-face detection with a deep neural network anti-spoofing ensemble (97.8% accuracy).
- Engineered a thread-safe encrypted biometric database utilizing AES-256 Fernet encryption for secure storage and sub-50ms identification.

Education

Indian Institute of Information Technology (IIIT), Sonepat

Aug 2023 – Aug 2027

Bachelor of Technology (B.Tech) in Information Technology — Sonepat, Haryana

Adarsh Regional Senior Secondary School

2022

RBSE Class XII — **83.0%** — Nadbai, Bharatpur, Rajasthan

Certifications & Achievements

- AI - Data Engineering Analyst:** Certified by **NASSCOM / IT-ITeS SSC & Skill India Digital Hub** in AI data workflows (Aug 2026).
- Algorithmic Problem Solving:** Solved **200+ DSA Problems** on LeetCode and GeeksforGeeks (Arrays, Trees, Graphs, DP).
- Golden Reference Author:** Proven ability to write clean, idiomatic, PEP 8-compliant reference code with clear documentation.
